Illuminating ideas.

**MYSTERIOUS**

**niko**  
Illuminating ideas.

Niko has created a new concept for on the wall switches. A switch that will cause you to rethink your ideas about how a wall switch should look. No longer does a switch interrupt the look and feel of a wall, now it simply disappears, giving you all the convenience of a switch where you need it, whilst blending into the wall - invisibly.

Mysterious is more than a creative concept. Its invisible circular switch can control up to four lighting circuits - providing all of the durability and functionality of the more conventional Niko range of switches.

Mysterious easily disappears into the wall's surface as it takes on any wallcovering of choice.

Paint it, wallpaper it - you can even cover it in wood veneer. Whatever the look and feel of your wall - Mysterious will wear it, well.

The elegant and invisible solution for making a switch disappear, Mysterious is easy to find when you need it - a discreet white circle of light emanates from behind the switch in a darkened room to ensure that when you need to see your Mysterious switch, it will be there, clearly defined keeping you in control.

Mysterious will suit any room, even the kitchen. Chameleon-like, it will take on the look of its surroundings - more than just wallpaper or paint covering; from MDF to granite - it can wear the finish of your wall to provide the most discreet switch wherever you need it.

Multimedia plugs and orientation lights are also part of the Mysterious range. Just like the switch, they discreetly meld in to the wall complementing your interior design.

detail from atmosphere, bar furnishing

We hope this introduction to Mysterious will encourage you to explore the possibilities that Mysterious can offer you. More than just a wall switch, you can build Mysterious into almost anything in your room. In the following pages you will find ideas and explanations to show you how to install Mysterious in a range of different materials and locations.

## Installation in brickwork

is achieved with a standard drill with a diameter of 92mm. The blue insulation box is covered by a cardboard plaster mould. After plastering, this is removed to install the mounting ring. The orange flushmounting box and the wall socket can then be positioned. Finally, you make your mark on Mysterious with your own choice of finish.

## Installation in plasterboard

requires a hole saw, which is available from Niko. The mounting ring is attached with a 2-component chemical anchor (polyester-based). A protective covering ensures that the ring remains free of plaster residue during finishing. After the installation of the orange flushmounting box, the application of the finishing materials can be effected.

**Installation in  
MDF** is best effected  
by a skilled carpenter  
to ensure that,  
the opening is  
accurately created,  
for the highest quality  
finish.
